NEW BOOKS

Arnall, Ellis Gibbs. THE SHORE DIMLY SEEN. Philadelphia, J. B. Lippincott, 1946. 312 p. 280.12 Ar62.

"The Shore Dimly Seen' forms a document of first importance. It is a profession of faith by an American that will hearten all liberals - a record of accomplishment by a young statesman which awakens pride - and an open bid by an able politician for a wider influence in national politics ... The very appearance from the hand of a political leader of a memoir and manifesto of the quality of 'The Shore Dimly Seen' is a wholesome event. The book has its faults. The loose strings fairly hang out of it by which economists can tug at his program. It contains some loud reticences. It is repetitious. On foreign affairs it ventures remarks that are both naive & contradictory ... None the less, the Governor's treatment is a superior book. It is a significant, hopeful, enlightened work." - W. B. Hamilton. N.Y. Times.

"A stirring constructive philosophy of democracy ... pungently expressed, with a touch of satire, balanced by a sense of humor ... an important book." - R. W. Henderson. Library Journal.

Chase, Stuart. FOR THIS WE FOUGHT; guide lines to America's future as reported to the Twentieth century fund. New York, Twentieth Century fund, 1946. 123 p. 280.12 C38F.

"Sixth and final report on postwar questions. Survey of many polls indicates veterans and civilians alike seek full employment and security at home and peace abroad. Former can be achieved by a middle-of-the-road controlled capitalism designed to make possible a high wage, low-profit, mass-consumption economy: the latter by adoption of Lilenthal Committee's recommendations on international control of atomic energy." - Lib. J.

"This is a book for the general reader, not for the student. It is written in Chase's athletic and attractive style and is worthy of attention." - F. H. Douglas.

Dimock, Marshall Edward. THE EXECUTIVE IN ACTION. New York, Harper, 1945.
276 p. 249 D59.

"The greatest merit of this book is its demonstration of the organic, as contrasted with mechanical, nature of organizations and of the evolutionary process of adaptation as the dominant aspect of executive behavior. It is this, as Dimock points out, that makes most executives inarticulate about what they are really doing. It explains why management and administration are so obscure to people without experience in this field. Professor Dimock has performed a needed service in making this so clear." - C. I. Barnard. Political Science Quarterly.

Dull, Raymond William. MATHEMATICAL AIDS FOR ENGINEERS. N. Y., McGraw, 1946. 236 p. 325 D882M.

"Book gives engineers basic mathematical tools and shows their application in many engineering fields. Covers every phase of mathematics from simple numeric computations through integration and summation. New equations for construction of types of alignment charts. Prominence is given to vector analysis and new methods to simplify solution of somewhat difficult engineering problems." - Library Journal.

Farnham, Richard Bayles. GROUNDS FOR LIVING. New Brunswick, Rutgers University Press, 1946. 334 p. 90 F23.

The author represents gardening as a way of life. There is material on landscape gardening, lawns, shrubs, trees, flowers, hobby crops, vegetables, fruits, etc.

"Book of sound and practical advice and information on how to plant things and make them grow outside the house, for couples with time and inclination and space in which to operate. There are some 150 sketches by way of illustration." - DBB.

Johnson, Sherman Ellsworth. MANAGING A FARM. New York, D. Van Nostrand, 1946. 281.12 J62.

"Practical guide for either full time or part time farmers. Contains information on selecting a farm, planning the layout, work programs, record keeping and finance." - Book Review Digest.

"Although the book is written by leading farm economists it has been kept about as clear and practical as the subject matter permits. Taken thoughtfully, it could give a general reader a satisfactory course in farm economics." - U. S. Quarterly Booklist.

McDonald, Philip Bayaud. PERSONALITY AND ENGLISH IN TECHNICAL PERSONNEL. N. Y., D. Van Nostrand, 1946. 424 p. 249.3 M14.

"Chapters 9 to 25 comprise a text, and an excellent one, covering mistakes made by the novice, sentence structure, vocabulary, and

cultural reading. These chapters are crammed with practical aids to better English ... The other chapters, 1 to 8 and 26 to 33 ... belabor the technical man at length for shortcomings which though possibly deserved, seem to the reviewer to be defects of adult beings in general." Chaplin Tyler.

Miller, Clyde Raymond. THE PROCESS OF PERSUASION. N. Y., Crown, 1946.
234 p. 140 M61.

"Dr. Miller writes with facility and frequently dips into his fine store of anecdotes to add warmth and humor to his material. The Process of Persuasion is quick, entertaining reading - an important book that should have the effect of atomizing a lot of stereotyped and hence dangerous thinking." - Charlotte Gorman.

Muenschner, Walter Conrad Leopold. KEYS TO WOODY PLANTS. Ed. 5. N. Y., Comstock, 1946. 108 p. 455.34 M88 Ed.5.

"Professor Muenschner's keys for the identification of trees and shrubs have long been well-known and popular among foresters, horticulturists, and teachers of field botany. This is the fifth edition of the book (the first was in 1922) revised and slightly enlarged. It contains diagnostic keys, first to the genera of woody plants and then to species arranged in systematic order, a partially illustrated glossary, and finally an index. It is well printed and bound, and is of handy pocket size." - Hugh M. Raup.

Odum, Howard Washington. THE WAY OF THE SOUTH: TOWARD THE REGIONAL BALANCE OF AMERICA. New York, Macmillan, 1947. 350 p. 280.002 Od8W.

"For forty years Howard W. Odum, a native Georgian long resident in North Carolina, has been an indefatigable student of Southern Society. To a considerable extent "The Way of the South" is a popularization of previous works of his on regionalism and race, with an admixture of history and poetry. He writes with the fervor of a regional patriot, quoting Walt Whitman and Stephen Vincent Benet and falling into the mood of rhapsody at times, and he regards regional distinctiveness as desirable, but he is not to be thought of as an apologist. The questions he raises about the South are: How did it get that way, and whither should it be going? His answers are not always clear but they are profuse and suggestive." - Dumas Malone. N. Y., Herald Tribune.

Tannehill, Ivan Ray. DROUGHT: ITS CAUSES AND EFFECTS. Princeton, N.J., Princeton University Press, 1947. 264 p. 340 T15D.

Mr. Tannehill's hobby for nearly 30 years has been the study of rainfall variations. In this book he presents the history of droughts in the United States and reviews rainfall records in an attempt to explain drought, one of the world's greatest mysteries.
